BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problems Mailbox.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
The present sequence is that of BASBIIO protein from Moraxella CC catarrhalis strain Mc2931 (APCC 43617), a causative agent of otitis CC media in children and pneumonia in adults. The sequence is CC differs by 1 residue from the predicted polypeptide sequence (see AB20107) of a BASBIIO per product, having Ser rather than Gly at CC polymucleotides encoding them, as well as expression vectors, host CC cells and methods for producing BASBIIO polypeptides using CC recombinant methods. Also claimed is a vaccine composition and CC comprising a BASBIIO polypeptide, an immunogenic frament of a cid sequence identity to BASBIIO, or comprising at least 85% amino CC moraxella infection involves identifying a BASBIIO polypeptide or a cid sequence identity to BASBIIO, or comprising a polymetide composition comprising such a polypeptide. A claimed method of diagnosing a cc matibody. A claimed therapeutic composition useful in treating them the composition useful in catarrhalis infection comprises at least 1 antibody antibody antibody and sequence antibody. A claimed therapeutic composition useful in treating control of the composition useful in treating that useful in reating section useful in treating antibody antibody and section comprises at least 1 antibody antibodies also composition useful in treating that useful in treating section useful in treating section useful in treating that useful in treating section composition useful in treating composition useful in treating section composition and section antibody antibodies, and in screening for antibodies.
                                                                                                                                                                                                                      BASB110; infection; otitis media; pneumonia; therapy; diagnosis; antibacterial; antimicrobial; vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel BASB110 polypeptides of Moraxella catarrhalis, useful as vaccine for treating Moraxella catarrhalis infections -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               181 VAPPVTEAPFATGSSGVMQFRYFVGATNFVVRRFGTATVAGSTVTSNGMWFSGRDGDLIN 240

                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                           The present sequence is the Haemophilus somnus lipoprotein LppB.

Recombinant vaccines containing H. somnus lipoproteins LppA, LppB
and LppC have been described. H. somnus transferrin-binding proteins Tbpl
and Tbp2 have also been found to be effective in vaccines against
cand Tbp2 have also been found to be effective in vaccines against
containing a genomic expression library of H. somnus strain HS25 in
containing a genomic expression library of H. somnus strain HS25 in
containing a genomic expression library of H. somnus strain HS25 in
containing a genomic expression library of H. somnus strain HS25 in
containing encount antiserum raised against affinity-purified Tbp1
and Tbp2 of H. somnus. The genes coding for Tbp1 and Tbp2 were obtained
by inverse PCR. The nucleotide sequence encoding Tbp1 and Tbp2 may be
used for the recombinant production of Tbp1 and Tbp2, which may then be
used to manufacture vaccine compositions for immunising against H. somnus
infections. The antibodies raised against the transferrin binding
proteins may also be used diagnostically to identify the presence of
the somnus infections. H. somnus is a pathological Gram-negative bacteria
that causes a number of diseases in cattle such as thromboembolic
meningencephalitis (ITEME), myocarditis, septicaemia, arthritis and
                                                                                                                                            Matches
                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; Fig 11; 67pp; English.

                                                          represent novel Neisseria meningitis and N. gonorrheae polynucleotides and polypeptides. AAZ54537 to AAZ54576 and AAZ54616 to AAZ5473 represent PCR primers used in the exemplification of the present invention. The polypeptides, the polynucleotides, antibodies and compositions of the invention can be used as vaccines, as diagnostic reagents, and as immunogenic compositions. The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisseria bacteria, or to raise antibodies. They may also be treated to the presence of Neisseria bacteria, or to raise antibodies.
be used to screen for agonists or antagonists, which may themselves have use as antibacterial agents. The polynucleotides of the invent may also be used in gene therapy protocols.
                                                                                                                                                                                                                                                                                                                                                                                              Novel Neisserial polypeptides predicted to

AAZ54573 to AAZ54576 and AAZ545616 to AAZ55473 represent PCR primers used in the exemplification of the present invention. The polypeptides, the polynucleotides, antibodies and compositions of the invention can be used as vaccines, as diagnostic resegents, and as immunogenic compositions. The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisseria (e.g. meningitis and septicaemia), to detect the be used to screen for agonists or antagonists, which may themselves have use as antibacterial agents. The polynucleotides of the invention may also be used in gene therapy protocols.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAZ53015 to AAZ54536, AAZ54577 to AAZ54615, and AAY74253 to AAY75941 represent novel Neisseria meningitis and N. gonorrheae polynucleotides and polypeptides. AAZ54375 to AAZ54576 and AAZ54516 to AAZ55473 represent PCR primers used in the exemplification of the present invention. The polypeptides, the polynucleotides, antibodies and compositions of the invention can be used as vaccines, as diagnostic reagents, and as immunogenic compositions. The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisseria bacteria, or to raise antibodies. They may also be used to screen for agonists or antagonists, which may themselves have use as antibacterial agents. The polynucleotides of the invention

                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      B12. The genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes-related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for the treatment or prevention of infections by L. monocytogenes and related organisms.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to the genome sequence of Listeria monocytogenes EGD-e (see ABA03041). The genome sequence and fragments it are useful for selecting probes and primers for detecting genes in monocytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Maduenio E, De Rose M, Voss H;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     encoded by the genome sequence of the present invention. Proteins expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, an for biosynthesis and biodegradation, especially biosynthesis of Vitamin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Genomic sequence for Listeria monocytogenes, useful e.g. and prevention of Listeria and related bacterial infectic related polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Buchrieser C, Frangeul I, Couve E, Rusniok C, Feihi H, Dehoux P, Dussurget O, Chetouani F, Nedjari H, Glaser P, Kunst F, Cossart Daniels J, Goebel W, Kreft J, Kuhn M, Ng E, Vazquez-Boland JA; Dominguez-Bernal G, Garrido-García P, Tierrez-Martinez A, Amend A, Chakraborty T, Domann E, Hain T, Berche P, Charbit A, Durant L; Perez-Diaz J, Baquero F, García Del Portillo F, Gomez-Lopez N; Perez-Diaz J, Baquero F, García Del Portillo F, Gomez-Lopez N; Madduenio E, De Pablos B, Wehland J, Kaerst U, Entian K, Hauf J;

                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                         The sequence is that of the Listeria p60 protein. Antibodies generated against the protein can be used in the detection of Listeria by immunoassay (partic. ELISA). The detection method allows determination of individual Listeria species, esp.

The nucleic acid sequence is useful in the detection and/or amplification of related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The production helps research in lactic bacteria, particularly useful in the production of yogurt and cheese.

Note: The sequence data for this patent is based on equivalent patent format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                  monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of it are useful for selecting probes and primers for detecting genes in L. comproytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein encoded by the genome sequence of the present invention. Proteins expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and for biosynthesis and biodegradation, especially biosynthesis of Vitamin B12. The genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes-related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for the treatment or prevention of infections by L. monocytogenes and related organisms.
                                                                                                                                                                                                           Query Match

                                      AAR73913 is the Listeria monocytogenes protein P60 precursor. It contains the meningitis related antigenic sequences (MRHAS) claimed in AAR73891-R73894 and AAR73903-R73906, which are recognised by a monoclonal antibody from the hybridoma Rubella virus (RV)-1. The claimed MRHAS peptides may be used in immunoassays to diagnose the presence of bacterial and/or viral meningitis agents in a sample, or in prophylactic and therapeutic meningitis treatments. The

These can be used in the production of vaccines against H. Children, pneumonia in elders, simusitis, nosocomial infections, or chronic otitis media in infants and invasive diseases, chronic otitis media with hearing loss, fluid eccumulation in the middle ear, auditive merve damage, delayed speech the middle ear. The present sequence is a version of the BASB201 protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      useful as components of vaccines for treating bacterial infection such as otitis media, delayed speech learning and inflammation of middle ear
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 3; Page 88; 90pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides the protein and coding sequences of several versions of the BASB201 protein from non-typeable Haemophilus influenzae. These can be used in the production of vaccines against H. influenzae infection, which can cause otitis media in infants and children, pneumonia in elders, sinusitis, nosocomial infections, or invasive diseases, chronic otitis media with hearing loss, fluid accumulation in the middle ear, auditive nerve damage, delayed speech learning, infections of the upper respiratory tract and inflammation of learning.

The process can be used in the manufacture of products containing cultures of lactic acid bacteria e.g. cheese, where the culture lysed following the completion of fermentation. The enhanced induction of the autolysin is performed some hours after the fermentation is finished. No extra lysin needs to be added and lysin does not need to be isolated or encapsulated. The time of

                                                                                                                                                  ABB54367;
                                                                                                                                                               ABB54367 standard; Protein; 894
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ABL50555 to ABL50562 represent contigs 1 to 8 from the Micromonospora carbonacea everninomicin biosynthetic locus gene cluster. The contigs encode the protein sequences designated ORF (open reading frame) 1 to 49, given in ABB06881 to ABB06930. The gene cluster is useful for the construction of the everninomicin antibiotic in overproducing strains, and to allow chemical modifications of everninomicin to enhance certains, gene cluster can be used to produce genetic systems and genetic manipulation or combinational biosynthesis. The gene cluster can be used to produce genetic systems and genes encoding novel enzyme activities, and avoid the problems of low yield and quality of everninomicins produced by chemical synthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 15; Fig 1; 181pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel isolated gene cluster encoding polypeptides involved in everninomicin biosynthesis useful for construction of everninomicin strains, and to allow chemical modifications of everninomicin to enhance certain properties -

The nucleic acid sequence is useful in the detection and/or amplification of related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The production helps research in lactic bacteria, particularly useful in the production of yogurt and cheese.

Note: The sequence data for this patent is based on equivalent patent format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleotide sequence useful in the identification or Lactococcus lactis and related species -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2002-043418/06.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides the protein and coding sequences of several versions of the BASB201 protein from non-typeable Haemophilus influenzae. These can be used in the production of vaccines against H. influenzae infection, which can cause other sed in infections, or children, pneumonia in elders, simusitis, nosocomial infections, or invasive diseases, chronic other sedia with hearing loss, fluid accumulation in the middle ear, auditive nerve damage, delayed speech learning, infections of the upper respiratory tract and inflammation of the middle ear. The present sequence is a version of the BASB201 prote

The invention provides a method for detecting a US (sub)type hepatitis E virus (US-HEV), or its naturally occurring variants in a sample by treatment with a binding partner specific for a marker of the virus, and then detecting any complex formed. The method is used to diagnose infection with US-HEV. Polypeptides from US-HEV, antibodies specific for open reading frames (ORF) in US-HEV and host cells expressing these ORFs are useful in vaccines or for passive immunisation. The polypeptides are also used to raise specific antibodies (useful as immunoassay respents). Fragments of nucleic acid from US-HEV are useful as immunoassay respents) usual hybridisation and amplification assays for detecting infection. The present sequence represents a HEV-US2 ORF1 protein.

                                                                                                                                                                                                     The protein sequence of the beta lytic peptidase from Achromobacter lyticus was deduced from the DNA sequence obtd. by PCR using primers based on the sequence of the L. enzymogenes beta-protease. The beta-lytic protease is expected to be an enzyme which can decompose not only Gram-positive bacteria but also some Gram-negative bacteria.

                                                                                                                                                                                                                                                       The present sequence is a Achromobacter lyticus beta-lytic protease which has anti-staphylococcal activity. The beta-lytic protease gene is used in the production of altered genes which allow expression and preferably secretion of active protein in mammalian cells/tissues. The altered gene is produced by operably linking the beta-lytic protease coding sequence with mammalian promoter, signal peptide and translation initiation sequences. The modified sequence is used in gene therapy to treat staphylococcal mastitis infections truninants, e.g. goats, sheep, and cows. It is also used to produce transgenic animals which are resistant to staphylococcal infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Beta-lytic protease; antibiotic; anti-staphylococcal; gene therapy; mastitis; staphylococcal infection; rum transgenic animal; altered beta-lytic protease gene.

                                                                                                                                                                                 mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. are useful for identifying the mutation point of a gene derived from

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ś
            CC The invention relates to RP-factors which are substances that can CC resuscitate dormant, moribund or latent cells, possibly also having CC growth-stimulating activity. Host cells containing a vector comprising CC the RP-factor or its receptor encoding nucleic acid can be used for the CC recombinant production of the RP-factor. RP-factors, their receptors or CC convertases, antibodies (against the RP-factors and RP-factor receptors or CC convertases), antegonists and agonists. Are useful in vaccines and for CC excipients, generally as antimicrobials and especially for infections CC excipients, generally as antimicrobials and especially for infections CC associated with latency. They can be used as potentiators of antibiotics such as isoniazid, streptomycin etc., in treatment of tuberculosis. CC RP-factor can also be used: to determine the microbiological quality of foods, pharmaceuticals, medical products; as culture additive for bacteria; to stimulate growth and/or to resuscitate microvganisms and to produce libraries of biomolecules and microorganisms (which may then be corporated for useful products). Probes complementary to the RP-factor culcia acid are used identify and clone other RP-factor genes. The corporations may also be used to prevent bacterial resuscitation. Breaking CC dormancy with RP-factor facilitates detection, culture and enumeration of the corporation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RP-factor; resuscitate; latent cell; growth-stimulation; receptor; Y convertase; vaccine; immunotherapy; prophylaxis; excipient; antibiot antimicrobial; tuberculosis; food; pharmaceutical; culture additive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New bacterial resuscitation factors - useful for stimulating bacteria and growth, particularly for use as antimicrobials, vaccines comprising bacteria with mutations in resuscitation

In situ production of a homologous autolysin or a heterologous autolysin from a food grade Gram positive bacteria, can be used in process for the lysis of a culture of lactic acid bacteria. The cultures of lactic acid bacteria and the manufacture of products containing lysed following the completion of fermentation. The enhanced induction of the autolysin is performed some hours after the fermentation is finished. No extra lysin needs to be added and the lysin does not need to be isolated or encapsulated. The time of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

The present invention describes primer sets for synthesising 5602 (C full-length cDNAs defined in the specification. Where a primer set (C comprises (a) an oligo-dr primer and an oligonucleotide complementary for the following strand of a polymucleotide which comprises one of complementary strand of a polymucleotide which comprises one of configuration of a polymucleotide which comprises one of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination composition of a polymucleotide which comprises a 5'-end complementary strand of a polymucleotide which comprises a 5'-end complementary to a complementary to a complementary to a complementary to a complementary to a complementary to a complementary to a complementary to a complementary to a complementary to a complementary to a complementary comprises at least 15 nucleotides and the combination of the specification. The primers sets can be used in antisense therapy and comparises at least 15 nucleotides and the combination of the specification. The primers are useful for synthesising polymucleotides and the comprises at least 15 nucleotides and the combination of the specification. The primers are useful for synthesising polymucleotides and the complementary that comparise complementary that the complementary that comparise comparises and the complementary and comparise comparises at least 15 nucleotides and the complementary that comparise comparises comparises comparise comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises comparises c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT 24

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH18628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB82446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            BVH-P1
                                                Claim 21; Fig 16;
                                                                                                    New Streptococcus pyogenes antigen useful for diagnosing, treating streptococcal infection, e.g. pharyngitis, erysiningetigo, scarlet fever, and invasive diseases
                                                                                                                                                                                                                                                                                   Martin D,
                                                                                                                                                                                                                                                                                                                                                                                          06-JUL-2000; 2000US-216465P

The polypeptides and polynucleotides encoding them are useful for diagnosing, preventing or treating streptococcal infection, such as pharyngitis, erysipelas, impetigo, scarlet fever, invasive diseases (bacteraemia, necrotising fascitis, toxic shock), and for eliciting an immune response. The polypeptides may also be used as immunogens for producing antibodies for the diagnosis and treatment of Streptococcus infection, or for passive immunisation. DNAs encoding polypeptides may also be used to design DNA probes for detecting the presence of Streptococcus in biological samples suspected of containing the bacteria. The vaccine composition is useful as a prophylactic or the bacteria. The vaccine composition is useful as a prophylactic or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to antigens, more particularly an antigen of Streptcoccus pyogenes (also called group A Streptcoccus (GAS))

C bacterial pathogen. The polypeptides and polynucleotides encoding them are useful for diagnosing, preventing or treating streptcocccal infection, such as pharyngitis, erysipelas, impetigo, scarlet fever, invasive diseases (bacteraemia, necrotising fascitis, toxic shock), and for eliciting an immune response. The polypeptides may also be used as immunogens for producing antibodies for the diagnosis and treatment of streptcocccus infection, or for passive immunisation. DNAs encoding polypeptides may also be used to design DNA probes for detecting the presence of Streptcoccus in biological samples suspected of containing the rapputic treatment of Streptcocccal infection in an individual susceptible to or infected with streptcocccal infection. The present sequence is Streptcocccus pyogenes strain B514 BVH-P1 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to a cellulase active protein, which is substantially free of proteinases of native thermophilic and alkalinophilic oxigin, where the cellulase active protein consists of the CelB5 amino acid sequence. The cellulase active protein is useful for treating cellulosic materials including cotton-containing fabrics, as detergent additives. The cellulase active protein is also useful for improving the feel and/or appearance of cotton-containing fabrics, for removing surface fibers from cotton-containing knits or for imparting stonewashed appearance to cotton-containing denims. The present proteins are stable under condition of alkaline pH and elevated temperatures, thus suitable for textile processing and in commercial detergents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New cellulase active protein, useful in textile processing commercial detergents, e.g. for improving the feel or appear cotton-containing fabrics, is stable under conditions of all
                   Lysin carboxy terminal repeat region.

The invention relates to 40 human secreted proteins (AAY94981-Y95020), CC and cDNA sequences encoding them (AAA2423-A23462). The secreted components of the invention include those that are thought to be only partially secreted, i.e., transmembrane proteins. The proteins of the convention may exhibit one or more activities selected from the following: CC cytokine activity, cell proliferation; differentiation; immune cc activities activity; and tumour matchinish activity; anti-inflammatory activity; and tumour cativities selected from the following: CC and thrombolytic activity, anti-inflammatory activity; and tumour conditions, and the nucleotides may be administered to patients as concleotides of the invention include autoimmune diseases; genetic cd disorders; haemophilia; cardiovascular diseases; cancer; bacterial, cf fungal and viral infections, especially HIV, multiple sclerosis; casthma and anaemia. They may also be used for treating wounds, burns, cludes, osteoarthritis, periodontal diseases, harheimer's disease, parkinson's disease, Huntington's disease and amyotrophic lateral sclerosis (ALS). Proteins with activin/Inhibin activity may cadditionally be useful as contraceptives. Nucleic acid sequences of the invention may be used in chromosome mapping, and as a source of che convention may be used in chromosome mapping, and as a source of the cDNA clones of the invention.
                                                                                                     Matches
                                                                                                                               Query Match

                                                                                                                                                                                                The present invention relates to a method for identifying modulators of actin polymerisation. The method involves using proteins that contain least one binding motif for proteins of the Ena/NASP (Vasodilator-stimulated phosphoprotein) family in the preparation of reagents for identification/screening of modulates that modulate formation of the actin cytoskeleton. The proteins used in the method (i.e. the proteins with binding motif(s) for Ena/VASP proteins) do not bind to the Arp2/3 protein complex. The modulators identified by the method are potentially useful for treating disorders of actin polymerisation, e.g. metastatic cancer or parasitic infection; and as cytotoxic agents. The present sequence one such protein with binding motif(s) for Ena/VASP proteins, which was used in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                        Identifying modulators of actin polymerization, potentially useful for treating tumor metastasis and parasitic infection, using proteins that contain Ena/VASp binding sites -

Peptide fragments of WASP-family proteins of eukaryotic cells are used to prepare reagents for detecting compounds that inhibit or stimulate formation of the actin cytoskeleton, and thus inhibit or stimulate cell motility. The peptides are used to detect and identify compounds which are potentially useful for treating diseases associated with dysfunction of actin polymerisation, particularly metastatic cancer and parasite infection; as cytotoxic agents for inhibiting/stimulating formation of the actin cytoskeleton and for detecting side-effects, on actin polymerisation, of pharmaceuticals. By modulating actin polyment, the immune

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                            The invention relates to human MAGI protein, which is similar to neuroendocrine-specific protein. The MAGI protein can be expressed by standard recombinant methodology. The MAGI polypeptides, polynucleotides and antibodies are useful for treating diseases, including neuropathies, spinal injury, neuronal degeneration, neuromuscular disorders, stroke and inflammatory disorders and developmental disorders, cancer, stroke and inflammatory disorders. The polynucleotide is also useful for chromosome localization and for tissue expression studies. The present sequence represents the human MAGI protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MAGI protein; neuroendocrine-specific protein; neuropathy; human; spinal injury; neuronal degeneration; neuromuscular disorder; can psychiatric disorder; developmental disorder; inflammatory disord stroke; cytostatic; cerebroprotective; neuroprotective.
                                                                                                                                                                                                                                  Novel polypeptides related to neuroendocrine-specific proteins and polynucleotides useful for diagnosis of various diseases and for treatment of cancer and neurological disorders -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence is the human Nogo protein, a 250kDa myelin-associated axon growth inhibitor. The invention relates to the use of the nogo receptor, nogo protein, their nucleic acids, vectors expressing them and antibodies growth. The agent is useful for treating a central nervous system chief by thich block nogo receptor mediated axonal disorder which is a result of cranial or cerebral trauma, spinal cord injury, stroke or a demyelinating disease selected from multiple sclerosis, monophasis demyelination, encephalomyelitis, multifocal pontine myelinolysis, adrenoleukodystrophy, Pelizaeus-Merzbacher disease, Spongy degeneration, Alexander's disease, Canavan's disease, metachromatic leukodystrophy, viral infection and Krabbe's disease.

NOGO-A is a previously known splice variant of the human NOGO gene on chromosome 2p21. The invention relates to a novel splice variant, NOGO-C (see AAB82348). It provides NOGO-C polypeptides and polynucleotides, and methods for producing such polypeptides by recombinant techniques. Also disclosed are methods for utilising NOGO-C polypeptides and polynucleotides in the treatment of diseases including neuropathies, spinal injury, brain injury, stroke, neuronal degeneration, for example Alzheimer's disease and Parkinson's disease, neuromuscular disorders, psychiatric disorders and developmental disorders. Also provided are methods for identifying agonists and agonists for use in treating conditions assets associated with NOGO-C imbalance, and diagnostic assays for detecting disease associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; vaccination; gene therapy; nutritional supplement; stem cell proliferation; haematopoiesis; nerve tissue regeneration; immune suppression; immune stimulation; anti-inflammatory; leukaemia
                   The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent

         This invention describes a swine hepatitis E virus (HEV) and its natural mutants which are capable of cross-reacting with antibodies reactive with a human HEV strain or natural mutants. The HEV and the proteins can be used in vaccines for immunising against HEV infection. The swine HEV can be used in humans to prevent possible infection by human HEV. The swine HEV can also be used as a therapeutic treatment for infection by other strains of HEV. The swine HEV can also be used for the production of antibodies which can be used in therapy, detection and diagnosis. The products can also be used for determining the susceptibility of cells or organs to infection with swine HEV. The swine HEV is particularly useful for the development of agents for the prevention, treatment and detection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used tincrease stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AMU29510-AAU33304 represent the amino acid sequences of novel human secreted proteins of the invention.
                                                                                                                                                                                                                                                                 New isolated swine hepatitis E virus - used to develop products the diagnosis, prevention and treatment of hepatitis E virus infection in mammals, particularly humans

                                                                                                                                                                                                                                                                                                                    Ś
                                                                                                                                                                                                                                                                                                                                                               D,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to antigens, more particularly an antigen of CC Streptococcus gyogenes (also called group A Streptococcus (GAS))

CC are useful for diagnosing, preventing or treating streptococcal for infection, such as pharyngitis, erysipelas, impetigo, scarlet fever, CC for eliciting an immune response. The polypeptides may also be used as CC Streptococcus infection, or for passive inmunisation. DNAs encoding the CC infection for producing antibodies for the diagnosis and treatment of CC Streptococcus infection, or for passive inmunisation. DNAs encoding the CC polypeptides may also be used to design DNA probes for detecting the CC polypeptides of Streptococcus in biological sampless suspected of containing the CC the bacteria. The vaccine composition is useful as a prophylactic or CC therapeutic treatment of Streptococcal infection in an individual CC sequence is Streptococcus pyogenes strain SPY57 BVH-P1 mature protein.

Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying

                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                                                                                                              infection, such as pharyngitis, erysipelas, impetigo, scarlet fever, invasive diseases (Dacteraemia, necrotising fascitis, toxic shock), and for eliciting an immune response. The polypeptides may also be used as immunogens for producing antibodies for the diagnosis and treatment of Streptococcus infection, or for passive immunisation. DNAs encoding polypeptides may also be used to design DNA probes for detecting the presence of Streptococcus in biological samples suspected of containing the bacteria. The vaccine composition is useful as a prophylactic or therapeutic treatment of Streptococcal infection in an individual suspected to or infected with streptococcal infection. The present
                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to antigens, more particularly an antigen Streptococcus youghnes (also called group A Streptococcus (GAS)) bacterial pathogen. The polypeptides and polynucleotides encodin are useful for diagnosing, preventing or treating streptococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 21; Fig 6; 74pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New Streptococcus pyogenes antigen useful for diagnosing, preventitreating streptococcal infection, e.g. pharyngitis, erysipelas and impetigo, scarlet fever, and invasive diseases

GENERAL INFORMATION:

APPLICANT: Potter, Andrew A.

APPLICANT: Rioux, Clement

APPLICANT: Rioux, Clement

APPLICANT: Schryvers, Anthony B.

TITLE OF INVENTION: CLONING AND EXPRESSION OF HAEMOPHILUS SOMNUS

TITLE OF INVENTION: TRANSFERRIN-BINDING PROTEINS

FILE REFERENCE: 9000-0049.20

CURRENT APPLICATION NUMBER: US/09/405,728

CURRENT FILING DATE: 1999-09-24

EARLIER APPLICATION NUMBER: US 09/267,749

EARLIER APPLICATION NUMBER: US 09/267,749

EARLIER APPLICATION STORY OF SEQ ID NOS: 5

SOFTMARE: Patentin Ver. 2.0
